DYLAN TRAN

Full-Stack Software Engineer

Sydney, NSW | +61 405 552 908 | trinhhieu.tran.au@gmail.com

Professional Summary

Full-stack software engineer with 4+ years of commercial experience building and supporting production web and mobile applications, including end-to-end delivery in the Australian market. Specialises in TypeScript, using React for front-end applications and NestJS on Node.js for back-end services, with hands-on experience across solution design, AWS deployment and CI/CD. Turns business requirements into reliable, maintainable software while improving system performance and cloud efficiency.

Technical Skills

Languages: TypeScript, JavaScript, SQL, C#

Frontend: React, React Native, Next.js, Redux Toolkit, React Query, Tailwind CSS

Backend and APIs: Node.js, NestJS, Express.js, ASP.NET Core, REST APIs, GraphQL

Databases and Messaging: PostgreSQL, SQL Server, Redis, Elasticsearch, DynamoDB, Kafka

Cloud and DevOps: AWS (EC2, RDS, Lambda, S3, Cognito, ECR, ECS), Docker, Git, CI/CD

Architecture and Practices: Microservices, event-driven architecture, Agile/Scrum

AI-Assisted Development: Cursor, OpenAI Codex

Professional Experience

Independent Software Engineer | Hi-Tech Builder Pty Ltd, Sydney Jul 2025 - Present

- Owned end-to-end delivery of a production construction-management platform in three months, from requirements and architecture through React, React Native and NestJS development, AWS deployment and App Store release, replacing paper-based processes with centralised tracking.
- Reduced monthly EC2 and RDS costs by **40%** through instance rightsizing, then secured further AWS savings with an EC2 Reserved Instance and S3 lifecycle policies that moved infrequently accessed objects to S3 Glacier.
- Maintain the production platform launched in October 2025, delivering business-requested releases in February and June 2026 to support evolving operational requirements.
- Designed AWS security controls using a custom VPC and security groups for EC2-to-RDS connectivity, with IAM roles providing least-privilege access to S3.

Full-Stack Developer | Rikkeisoft Jan 2025 - Jun 2025

Client: Major US-based convenience retailer

- Delivered full-stack features for an enterprise master data and supply chain platform using React, Express.js and PostgreSQL, with Dockerised microservices deployed on Amazon ECS.
- Contributed to optimising PostgreSQL-to-Elasticsearch synchronisation through Kafka, helping reduce unnecessary message traffic and Kafka bandwidth usage.
- Proposed and began implementing version-controlled migration scripts to replace direct database updates and improve the traceability and consistency of master data changes.

Full-Stack Developer | KidsPlaza Nov 2023 - Dec 2024

- Earned promotion to Frontend Team Lead within eight months, leading 3–4 engineers and owning code quality, UI delivery and technical decisions for the new Next.js storefront.
- Enabled the staged transition from Magento to an in-house microservices platform for a retailer with approximately 200 stores across Vietnam by developing NestJS APIs, designing database schemas, implementing Kafka-based batch migrations and integrating the legacy and new systems.
- Standardised authentication across backend services by building a shared NestJS security package with AWS Cognito token-validation guards, reducing duplicated logic and ensuring consistent access control.
- Optimised API performance by implementing a Redis caching strategy with fine-grained invalidation at query and service levels, reducing response times and redundant database queries.
- Extended existing Docker and CI/CD patterns for new backend services, resolving build and pipeline failures and maintaining reliable container image publishing to Amazon ECR.
- Designed and delivered a festival registration and check-in subsystem using GraphQL subscriptions, giving operations staff real-time attendance visibility and accurate capacity tracking.

Software Engineer | Orient Software Mar 2022 - Jul 2023

UK Construction Technology Project

- Developed and maintained a web administration portal that centralised testing devices, field users and digital anchor pull-test results using C#, ASP.NET Core MVC, Vue.js and SQL Server.
- Restored secure customer access by migrating identities from a legacy Azure AD tenant to a new tenant, re-establishing administrative control while maintaining authentication continuity.
- Redesigned organisation-level login and Chargebee trial subscription workflows, simplifying account onboarding and subscription management for business customers.

German Facility-Management Project

- Delivered React features for a multilingual facility-management platform using Redux Toolkit, React Query and AWS Amplify, integrating backend APIs and resolving defects across multilingual user flows.

Education

Master of Information Technology Jul 2025 - Expected Jun 2027

Charles Darwin University, Sydney, NSW

Bachelor of Software Engineering Aug 2018 - Apr 2023

Ton Duc Thang University, Ho Chi Minh City, Vietnam
